

# PACIFIC LASER SYSTEMS

The Professional Standard

## PLS5X with Laser Receiver

The PLS5X is the first point-to-point layout tool for use on both indoor and outdoor job sites. Bright sunshine has traditionally limited the use of visible beam lasers to interior projects. The PLS5X partnered with a laser receiver gives the contractor the ability to accurately lay out a job site up to 250 + feet, even in the brightest outdoor conditions. The PLS5X can also be used inside, without the receiver, for all point-to-point alignment tasks.

 Laser Receiver Optional

### Exterior Applications for the PLS5X

Made In USA
